

Noah Kasper

Game Designer | Gameplay Programming | Technical Art

noahkasper9@gmail.com | linkedin.com/in/noahkasper | noahsark13.github.io

SUMMARY

Game Designer with a technical foundation in gameplay programming and technical art. Led design on a multidisciplinary team from concept through prototyping, playtesting, and production. Designs and builds gameplay systems, tools, and levels, bridging art, design, and engineering.

EDUCATION

Rochester Institute of Technology

Bachelor of Science in Game Design & Development | GPA: 3.84

Dean's List: all 8 semesters (Fall 2022 – Spring 2026)

Rochester, NY

May 2026

CORE SKILLS

Game Design: Gameplay & Systems Design, Prototyping, Playtesting & Iteration, Level Design & Modular Grayboxing, UI/UX Wireframing, Design Documentation (GDDs, Style Guides, Moodboards)

Programming: Gameplay Systems, C#, C++, Lua/Luau, HLSL, Python, JavaScript, Direct3D 11/12

Technical Art: Shaders (HLSL & Node-Based), Procedural Systems, IK & Procedural Animation, Bone Physics, Lighting, Optimization, Diegetic & Screen-Space UI

Engines: Unity, Unreal Engine 4/5, Roblox Studio, Godot

Art Tools: Blender, Maya, Substance Painter, Substance Designer, Marvelous Designer, Photoshop, Illustrator

Production: Agile Sprints, Gantt Scheduling, Git/GitHub, Trello, ClickUp, Notion

EXPERIENCE

Design Lead & Technical Artist — *State of Entropy*

June 2025 – May 2026

MAGIC Spell Studios, Magic Makers Program

Rochester, NY

Leadership & Production

- Helped co-found the project and served on its core leadership team from class prototype to a 13-person team; managed 4 artists and presented progress at regular reviews with industry professionals.
- Drove concepting, wrote design docs, and co-owned the timeline, scoping to an MVP and cutting luxury features.
- Reviewed team work for style fit with clear revision notes; coordinated feasibility with programming and audio.
- Helped lead recruitment of 20+ total members, conducting interviews and evaluating schedules and pipeline fit.

Systems & Technical Art

- Designed a reusable door prefab system with a central controller for manual or scripted events; a holographic shader on mesh planes reads each door's live state to display its status and destination.
- Built the alien's procedural locomotion with IK foot stepping, head tracking, and soft-bone physics, plus a curvature-driven dithered shader that reads as transparent while still rendering opaque.
- Created a room-based light group system, giving the team simple control over lighting states and scripted sequences.
- Engineered interactive terminals with curved in-world screens by rendering viewport UI onto the mesh's UVs.

Level & UX Design

- Built the full initial blockout and primitive prefabs for team prototyping, iterating the layout through playtests.
- Modeled and laid out most of level one's core rooms from concept art.
- Overhauled a programmer-first-pass UI/UX, creating mockups for team review before implementing in-engine.

Technical Artist (Co-op) — *Changeling VR*

June 2024 – August 2024

Rochester Institute of Technology

Rochester, NY

- Delivered VR-optimized, game-ready 3D assets and materials in UE4 for a faculty-led title released on Steam.
- Met deadlines other teams depended on, within a multi-team production of up to 20 per team.

PROJECTS

Direct3D 12 Renderer | C++, Direct3D 12, HLSL

Graphics Programming coursework

- Ported my Direct3D 11 class renderer to Direct3D 12 over a semester of graphics programming assignments.
- Implemented PBR shading, bindless resources, a per-frame constant ring buffer, and a multi-emitter particle system.
- Extended the course's DXR starter into a real-time path tracer (10 paths/pixel, 15 bounces, shadow rays).
